## A Free Managed Futures & Hedge Fund Database

### Top 10 – Worst 10 Long Short Equity

While past performance is not indicative of future results, it is immensely satisfying to own managers amongst the best performing managers for the year or month. Likewise, it is excruciating to have exposure to the worst ones. NilssonHedge tracks the best and worst managers within the Long/Short Equity Group. These reports are updated throughout the month, as more data arrives. This page shows the managers that we have classified as Long/Short Equity Managers.

Long Short Equity strategies typically have net long equity market bias. Sometimes this is variable, sometimes it is more static. This differentiates them from their market-neutral peers, also trading equities, but without the goal of removing market risk.

The Top 10 Long-Short Equity and Worst 10 Equity Long Short strategies for the reporting month are shown below. This is based on our proprietary composite data streams, but may contain errors. These are not filtered for Asset Under Management and are ranked on a simple return metric without adjusting for volatility.

For the year we have identified the following funds as being the best / worst from a performance perspective.

#### Top Funds YTD: Equity LS

This chart generally refers to the last month, based on reporting funds.
